

A large office area, above this busy high street store, has a series of exposed lightwells, which created glare and heat problems. The use of the many computer terminals was also very difficult due to the intense glare.

The Astralux 6000 louvre system provided an answer to the problems and was also the only product capable of being fitted to the unusual design and shapes of the glazing.

**Benefits**

Control of glare

Reduction of solar heat gain

Ability to fit unusually shaped windows
