

This modern building is a new, high tech medical assessment centre for Halton General Hospital. The entrance atrium to the centre suffered from heat and glare and therefore required an electric sun blind system to automatically control the environment.

Paul Rushden of Initiative Architects chose the Astralux 6000 louvre system for its style and practical operation.

The centre was officially opened by the Health Secretary, Colin Milburn during 2000.

Benefits

Control of glare

Reduction of solar heat gain

Architect

Initiative Architects

Contractor

Cruden Construction
