

Astralux Systems were asked to provide a shading system, which could be fitted to a series of barrel vault rooflights over a public walkway in a busy shopping centre.

The design was agreed and to ensure there was no disruption to the normal day-to-day business of the shopping centre, installation was carried out during the night.

The result was a very effective and aesthetically pleasing solution, which complimented the high specification refurbishment of the shopping centre.

Benefits

- Control of solar heat
- Control of environment
