

The commanding new building which houses the Railtrack Head Office in York had a requirement for 300 blinds.

To accommodate the occupants needs, various Astralux 3000 roller blinds were used. The majority of these took advantage of the Equinox fabric range which has many features including anti-glare backing, fire resistance and excellent radiant heat resistance.

The glazed reception area was fitted with automated roller blinds. In the event of a national incident these can be simultaneously lowered in order to provide privacy for their staff activities.

Benefits

Control of glare

Electrically controlled privacy
